

In a real tournament, it is usually easiest to just type this data in manually if a PDF isn't available. The fastest way is to have one person read the sheet while another types. Usually that process only takes 2-3 minutes once you have a rhythm going.

For this demonstration example, if you are clever you can probably finish the job faster by copying and pasting from the table.

At extremely large tournaments (Like the World Championship), using OCR to scan in the schedule or downloading a digital copy from the organizers can be worth it.
